

Saving crops with flood tolerant rice

IRRI and AfricaRice have developed and delivered flood tolerant rice varieties to millions of farmers in unfavorable rice-growing environments. A variety of the popular Swarna rice, Scuba rice can survive full submergence for up to 14 days.

- Scuba rice has been distributed to more than 4 million farmers.
- Scuba rice has been planted on about 2.5 million hectares in South Asia.
- Scuba rice yields between 0.7 t/ha and 1.5 t/ha over Swarna depending on duration of submergence.
